

# Learning locomotion gaits through hormone-based controller in modular robots

*Author: David Estévez Fernández*

*Advisor: Avinash Ranganath*

# Outline

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

# Introduction

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- **Modular robot:** robot composed of several smaller robots, called modules.
- Each module has its own control and communication electronics, sensors, actuators, batteries, etc.
- Modular robots can be **reconfigurable**, changing their shape and abilities.

# Introduction

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

Superbot

M-TRAN

# Introduction

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

Flexibility

Space Applications

Unknown or unstructured terrains

# Objectives

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

1. To find optimal locomotion gaits for at least 3 configurations
2. To discover the robot configuration and to select the required gaits
3. Test the gaits and controller on a simulated robot
4. Test the gaits and controller on a real robot

# Finding Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- **Problem:** to achieve coordination between modules

# Finding Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- **Solution:** Sinusoidal oscillators
- Inspired by nature (Central Pattern Generators)
- Defined by 4 main parameters:
  - Amplitude
  - Offset
  - Frequency / period
  - Phase

# Finding Locomotion Gaits

- Introduction
- Objectives
- **Finding Locomotion Gaits**
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

# Finding Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- Parameter optimization: Differential evolution
- Fitness function: distance travelled in 30 s

# Selecting Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- **Problem:** discovering robot configuration and module function

# Selecting Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

## Module configuration encoding:

$ID = f(\text{Local connector, remote connector, relative orientation})$

# Selecting Locomotion Gaits

- Introduction
- Objectives
- Finding Locomotion Gaits
- **Selecting Locomotion Gaits**
- Implementation
- Results
- Future work

## **Digital hormones:**

- Do not have a fixed destination
- They have a limited lifetime
- They can trigger different actions on different receptors

# Implementation: Software

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- **Implementation**
- Results
- Future work

## **Software:**

- Framework for testing gaits and controllers
- Developed in C++
- Explained in detail in chapter 4 of the Thesis

# Implementation: Hardware

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- **Implementation**
- Results
- Future work

## Challenges:

- Large number of modules required
- Modules are expensive
- Not easy to manufacture

# Implementation: Hardware

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- Existing open platform designed by Juan Gonzalez-Gomez:

**Y1 Module**

**SkyMega Board**

# Implementation: Hardware

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- Development of a platform based on the existing one

**REPY-2 Module**

**SkymegaSMD board**

# Results

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

# Future work

- Introduction
- Objectives
- Finding Locomotion Gaits
- Selecting Locomotion Gaits
- Implementation
- Results
- Future work

- More advanced modules
- Adding sensory feedback
- More generic controller

# Learning locomotion gaits through hormone-based controller in modular robots

## **Thank you!**
